COHERENCE OF MATTER WAVES

PROF. DR. WALTER STRUNZ

*INSTITUT FÜR THEORETISCHE PHYSIK,
TECHNISCHE UNIVERSITÄT DRESDEN*

Coherence properties of matter waves can be probed nicely with the help of interference experiments involving ultracold Bose gases. A thorough analysis of these measurements based on spatial and temporal correlations allows to gather detailed information about the underlying many-body quantum state. A stochastic representation of the matter waves successfully reproduces the experimental findings. After a short overview over matter wave interference experiments I focus on equilibrium fluctuations of an interacting ultracold Bose gas and their consequences for matter wave coherence.
